The Launch of WINN

The WINN (European Platform Driving Knowledge to INNOvations in Freight Logistics) project was launched on October 1, 2012. This 30 months project is co-funded by the 7th Framework Programme of the European Commission. The representatives from the European Commission and the project partners attended the kick-off meeting on October 15-16 in Zaragoza, Spain.

The goal of the WINN project is to create a European Technology Platform (ETP) on Logistics. The ETP will play a key role in the definition of the Logistics Innovation Agenda that will be implemented through the European Commission programs in the 2014-2020 period, among them Horizon 2020 program. Horizon 2020 is currently being defined and will be granted with EUR 80 billion.

WINN aims at shaping an innovation agenda in logistics and supply chain that, supported by the European Commission, will contribute to improve business competitiveness and sustainability.
