

Technical specification of equipment

File number: 20LIC.009

1. Equipment description

Infrared crystallizing system for polysters and biopolymers.

2. Technical specifications

The equipment must meet the following specifications:

- Volume: 60-100L (or similar)
- Process temperature range: 60-180°C (or similar)
- Crystallization and drying in one step

3. Other features

Positive value will be given to:

- The possibility of making demonstrations or simulations to evaluate the performance of the equipment
- Spare parts availability for at least 10 years
- Technical support and speed of response from the technical service
- Operation training and commissioning
